

EDUCATION

Georgia Institute of Technology	Atlanta, GA
Master of Science in Computer Science; GPA: 4.0/4.0	August 2026 – 2028
Birla Institute of Technology and Science, Pilani	Goa, India
Bachelor of Engineering in Computer Science (Minor in Data Science); CGPA: 9.2/10.0	November 2020 – June 2024

PROFESSIONAL EXPERIENCE

Software Engineer	July 2024 — Present
Microsoft — Azure Migrate	Hyderabad, India
- Engineered discovery and assessment frameworks for IIS Server, extending native horizontal coverage to .NET Core, Python, PHP, and Java apps across vCenter, Hyper-V, and Physical environments. - Re-architected the assessment engine for resource-constrained environments; implemented an in-memory caching strategy to prevent host resource exhaustion while maintaining high throughput. - Expanded end-to-end (E2E) service coverage across all 38 Azure regions, ensuring data integrity and high availability (HA) for global enterprise-scale deployments. - Architected a critical fallback extension for non-container workloads, driving assessment coverage to 99.9% across a dataset of 100K+ enterprise workloads. - Built distributed data pipelines using Kubernetes and Azure Resource Graph to scale asset discovery across heterogeneous enterprise environments.	
Member of Technical Staff Intern	January 2024 — June 2024
DevRev	Bengaluru, India
- Scaled the Global Notifications microservice to handle 60K+ daily events via distributed rate limiting, event-based throttling, and smart bucket clustering. - Architected a fault-tolerant limiter reducing spam by 85%; implemented hierarchical clustering with $O(\log n)$ retrieval to eliminate redundancy based on topic relevance. - Engineered an LLM-driven summarization pipeline (GPT-4/LangChain) for digest generation, compressing data throughput by 6x and improving actionable signal density. - Owned performance profiling across high-throughput flows (reminders, tasks), optimizing system reliability for global delivery.	
Software Engineer Intern	May 2023 — July 2023
Microsoft	Hyderabad, India
- Instrumented customer-side meter telemetry using OpenTelemetry and Geneva for Azure Business Continuity Center, enabling real-time observability for V1 services. - Designed resilience and observability surfaces for continuity scenarios, delivering reusable metrics artifacts adopted by adjacent engineering teams to accelerate integration.	

SELECTED PROJECTS

VerbalForge <i>Python, LangChain, Pinecone, React, Node.js</i>	August, 2025 — Present
Lead Developer	www.verbalforge.xyz
- Engineered a Multi-Agent System (MAS) with tool-use capabilities to automate context-aware GRE question generation and hint synthesis from disparate prep sources. - Developed a RAG pipeline using vector embedding-based semantic search to enable intuitive vocabulary discovery and real-time context injection. - Optimized full-stack architecture for low-latency production serving, handling high-dimensional vector lookups with sub-100ms response times.	

SKILLS

Languages	Java, Python, C++, C#, Go, SQL, JavaScript
Distributed Systems	Kubernetes, Docker, Kafka, Azure Resource Graph, vCenter, Hyper-V, OpenTelemetry
Databases	PostgreSQL, MongoDB
ML & AI	PyTorch, TensorFlow, LangChain, OpenAI API, NumPy, Pandas
Web & Frameworks	.NET Core, React, Node.js
