

EDUCATION

Georgia Institute of Technology	Atlanta, GA
Master of Science in Computer Science; GPA: 4.0/4.0	August 2026 – 2028
Birla Institute of Technology and Science, Pilani	Goa, India
Bachelor of Engineering in Computer Science (Minor in Data Science); CGPA: 9.2/10.0	November 2020 – June 2024

EXPERIENCE

Microsoft	Hyderabad, India
Software Engineer	July 2024 – July 2026
- Delivered the AI-First experience for Azure Migrate Agent, integrating RAG with a self-built NL2KQL tool for custom KQL generation and improving agent accuracy from 40% to 85%. - Owned the IISServer discovery and assessment microservice end-to-end: a distributed pub/sub service with concurrent task orchestration; designed versioned REST API contracts with integration test coverage, extending native support to .NET Core, Python, PHP, and Java apps on VMware vCenter. - Re-architected the compound assessment engine around event-driven Azure Resource Graph signals; migrated to .NET 8 and scaled persistence with Azure Cosmos DB batched bulk upserts, retry handling, and RU throughput controls. - Sole owner of a critical fallback extension for non-container workloads, driving assessment coverage to 99.9% across 100K+ enterprise workloads. - Drove daily E2E test coverage across all 44 Azure regions, safeguarding reliability and data integrity for enterprise-scale deployments. - On-call (DRI) for a Ring-1 service sustaining a 99.9% SLA: ran end-to-end RCAs, coordinated cross-team mitigations, and hardened delivery via managed-identity auth, CVE remediation, health probes, and CI/CD gates.	
DevRev	Bengaluru, India
Member of Technical Staff Intern	January 2024 – June 2024
- Engineered distributed rate limiting for the Global Notifications microservice (60K+ daily events) via Redis timed buckets with event-based throttling, eliminating drops under bursty load. - Built a fault-tolerant deduplication engine reducing spam by 85% via hierarchical clustering with $O(\log n)$ dendrogram-traversal lookup. - Built an LLM-driven summarization pipeline (GPT-4) for digest generation, compressing data throughput by 6x. - Profiled high-throughput flows (reminders, tasks), surfacing bottlenecks and improving reliability for global delivery.	
Microsoft	Hyderabad, India
Software Engineer Intern	May 2023 – July 2023
- Instrumented customer-side meter telemetry for the Azure Business Continuity Center using OpenTelemetry and Geneva, enabling real-time observability for V1 services. - Packaged the instrumentation as a reusable NuGet library with 99% test coverage, adopted by adjacent teams to accelerate integration.	

PROJECTS

- Artemis** (Python, Celery, Go, PostgreSQL, pgvector, OpenAI, Redis, Next.js): AI job-discovery engine. An autonomous LLM agent resolves a company’s careers page, fingerprints its ATS, and synthesizes a working scraper config unattended, generalizing **8** heterogeneous ATS integrations across **1,288** companies; event-driven Celery pipelines enrich postings and collapse duplicates by pgvector embedding similarity, with Redis Streams propagating change detection. github.com/artemis-agent.
- VerbalForge** (Go, Gin, MongoDB, Redis, Python, Pydantic, Azure OpenAI, Next.js, TypeScript): Microservice GRE platform. A constrained LLM pipeline synthesizes verbal questions and validates them against typed schemas, rejecting malformed items before they reach a session; provider failover across OpenAI and Azure OpenAI sustains generation under rate limits, and Redis Streams workers decouple chat, on-demand, and scheduled generation from the Go REST API. www.verbalforge.xyz.

SKILLS

Languages	Go, Python, C#, Java, C++, SQL, TypeScript, JavaScript
Systems	Kubernetes, Docker, Kafka, Celery, Redis Streams, Pub/Sub, Event-Driven Design, REST, gRPC
Cloud	Azure (Cosmos DB, Service Bus, Resource Graph, KQL), Azure DevOps, CI/CD, Git, OpenTelemetry
AI	RAG, LLM Agents, LangChain, OpenAI API, Azure OpenAI, pgvector, PyTorch, TensorFlow
Backend	PostgreSQL, MongoDB, Redis, .NET 8, ASP.NET Core, Gin, chi, Next.js, Pydantic, xUnit
