EDUCATION

Georgia Institute of Technology	Atlanta, GA
Master of Science in Computer Science; GPA: 4.0/4.0	August 2026 – May 2028
Current Coursework: Large Language Models, Machine Learning	
Birla Institute of Technology and Science, Pilani	Goa, India
B.E. in Computer Science (Minor in Data Science); CGPA: 9.2/10.0	November 2020 – June 2024

EXPERIENCE

Microsoft	Hyderabad, India
Software Engineer	July 2024 – July 2026

- Built a RAG-based Azure Migrate assistant with an NL-to-KQL query-generation pipeline, improving agent accuracy from **40% to 85%**.
- Developed Check-In and PreProd evaluation pipelines for the Azure Migrate AI agent, expanding Greenfield (happy-path) coverage from **0% to 100%** and detecting regressions before production deployment.
- Engineered a critical fallback extension for non-container workloads, expanding assessment coverage to **99.9%** across **100K+** enterprise workloads.
- Owned the IIS discovery and assessment microservice end-to-end, combining distributed pub/sub and concurrent task orchestration with versioned REST contracts to support .NET Core, Python, PHP, and Java apps on VMware vCenter.
- Served as on-call owner for a production service with a **99.9% SLA**, leading RCAs and cross-team incident mitigations while improving reliability and security through managed identity and CVE remediation.

DevRev	Bengaluru, India
Member of Technical Staff Intern	January 2024 – June 2024

- Engineered Redis-based distributed rate limiting for the Global Notifications microservice (**60K+ daily events**), eliminating drops under bursty load.
- Developed a fault-tolerant deduplication engine using hierarchical clustering, reducing duplicate notification spam by **85%**.
- Designed an LLM-driven summarization pipeline (GPT-4) for digest generation, compressing data throughput by **6x**.

Microsoft	Hyderabad, India
Software Engineer Intern	May 2023 – July 2023

- Instrumented customer-side meter telemetry for the Azure Business Continuity Center using OpenTelemetry and Geneva, enabling real-time observability for V1 services.
- Packaged the instrumentation as a reusable NuGet library with **99% test coverage**, adopted by adjacent teams to accelerate integration.

PROJECTS

Artemis Python, Go, Celery, PostgreSQL, Redis	github.com/artemis-agent
---	--------------------------

- Built an autonomous job-discovery agent that detects company ATS platforms and generates scraper configurations, supporting **8** ATS providers across **1,288** companies.
- Designed event-driven ingestion pipelines using Celery, Redis Streams, and pgvector for enrichment, change detection, and semantic job deduplication.

VerbalForge Go, Gin, Python, LangChain, MongoDB, Next.js	www.verbalforge.xyz
--	---------------------

- Built an autonomous assessment-generation agent that creates GRE-style questions, quizzes, and full-length exams across text completion, sentence equivalence, and reading comprehension.
- Designed a Python/LangChain pipeline with schema-based quality validation and stateful async workers, integrated with a Go/Gin REST API, MongoDB, and Next.js.

SKILLS

Languages	Go, Python, C#, C++, Java, SQL, TypeScript, JavaScript
Frameworks & APIs	.NET 8, ASP.NET Core, FastAPI, Gin, Next.js, React, REST APIs, gRPC, Microservices
Distributed Systems	Kafka, Celery, Redis Streams, Pub/Sub, Event-Driven Architecture, Docker, Kubernetes, Linux
Cloud & Reliability	Azure, AWS, EC2, SageMaker, Bedrock, Cosmos DB, Azure Resource Graph, OpenTelemetry, CI/CD, Git
Databases	PostgreSQL, MongoDB, Redis, pgvector
